

SUBFUND DESCRIPTION

Investment policy

The fund pursues the investment objective of the sub-fund by investing up to 100% of the sub-fund's assets in shares of the NN (L) European High Dividend foreign fund isolated as part of an NN (L) open-end investment fund with variable capital (SICAV). NN (L) European High Dividend invests primarily (at least two-thirds of assets) in European equity offering an attractive rate of return on dividends. Equity is issued by companies registered and listed on the stock exchange or traded in any European country (excluding Eastern European countries). Issuers are companies headquartered or with the primary business operation in Europe (excluding Eastern Europe).

Investor profile

The sub-fund is aimed at investors who are willing to invest for a period of at least 5 years, expect high returns, and accept the high risk associated with investments in shares of a foreign fund investing in equity, i.e. they take into account the possibility of strong fluctuations in the value of their investments, especially in a short-term perspective, including a potential loss of the investment, and also accept the risk related to the concentration of investments in companies offering an attractive rate of return on dividends, and related to the concentration of investments on the European market (excluding Eastern Europe), and additionally accept the average risk of Polish Zloty exchange rate fluctuations to Euro.

RISK

Investment risk

lower risk lower return potentially higher risk higher return potentially

The risk profile is determined based on the methodology used in the document: Key Investor Information. Historical data used to assign the risk category cannot predict the future risk profile of the fund. The fund objective does not include achieving the relevant risk category. The risk and return profile may change in the future. The lowest risk category (1) does not mean risk-free investment.

Risk and performance ratios data as of 31.12.2018

	1 year	3 years	5 years
Standard deviation	12,09%	11,53%	12,31%
Sharpe Ratio	-0,95	-0,08	0,10

GLOSSARY

Standard deviation is one of the most popular statistical measures that shows how much the total returns of the fund have changed in the past. The higher the ratio, the higher the risk of the investment in a fund share.

R², i.e. the square of the Pearson product-moment correlation coefficient, is one of more popular statistical measures showing the degree of correlation of a series of data with a benchmark. **Sharpe Ratio** describes to what extent the achieved rate of return rewards the risk taken by the investor by investing in high-risk assets. The measure enables to maximise the return and also minimise the risk, which can be achieved by selecting a fund with the highest positive value of the ratio.

Alfa is a measure indicating the possibility and scale of change in the price of the analysed instrument on the assumption that the value of the benchmark does not change. It can be a positive or negative value.

Beta is a measure showing the sensitivity to changes in the price of the analysed instrument in comparison with the change of a benchmark. A beta of 1.0 means that the expected 10% increase in the value of a benchmark will result in a 10% increase in the value of the analysed instrument (the share value in the case of funds). The higher the beta value, the riskier the investment.

Tracking Error enables to evaluate the consistency of effects of the investment policy of a manager with benchmark's returns. The lower the TE value, the smaller the possible resulting differences.

Rating Analiz Online is fund's rating taking into account both quantitative (such as returns) and qualitative factors. A fund analysis involves an in-depth examination of the four basic areas that determine the current behaviour of the fund and its behaviour in the future: managers and the investment process; investment policy and portfolio; portfolio characteristics; returns of the fund, the risk, costs and fees. The more stars are awarded, the better the rated quality of the fund. To put it very simply, 4 or 5 stars mean that relevant funds are worthy of interest in the first place because their characteristics show potential performance beyond the average in the relevant group.

Benchmark is a point of reference to evaluate results of fund's asset management. The following may be used, among others, as a benchmark: stock market index, inflation, return on certain government bills, or their relevant combinations.

This document has been prepared by Analizy Online S.A. (analizyonline.pl) for NN Investment Partners Towarzystwo Funduszy Inwestycyjnych S.A. and is of a promotional nature. NN Investment Partners TFI has the permission of the Financial Supervision Commission to operate its business. The funds risk profile presented in this document is based on the methodology used in the Key Investor Information. Top holdings, sectoral, geographic and currency allocations, and risk ratios the data are applicable to the NN (L) European High Dividend source fund. Rates of return (source: Analizy Online S.A.) are of a historical nature. Neither NN Investment Partners TFI, nor NN Investment Funds guarantee that funds or sub-funds investment objectives will be achieved or that similar returns will be achieved in the future. Investments in NN Investment Funds carry an investment risk, and participants have to take into account the risk of losing part of the investment. The individual return on investment is not identical with the investment return of the sub-fund and depends on the share value at the time of its sale and redemption by the sub-fund, and on the amount of collected handling fees and taxes due. Schedules of Fees and Charges are available at www.nntfi.pl. The NN Investment Funds description and their investment risk are included in the Information Prospectuses available in the registered office of NN Investment Partners TFI, at www.nntfi.pl, in the Key Investor Information available in the registered office of NN Investment Partners TFI, from Distributors and at www.nntfi.pl. All NN SOIF Sub-Funds net asset value may be subject to high volatility because the sub-funds assets are invested in shares of open-end investment funds or in shares of foreign funds that invest in equity or debt securities of higher risk. NN SOIF Sub-Funds invest all their assets in shares of foreign funds managed by an entity of the NN Investment Partners TFI group, and in shares of open-end investment funds managed by NN Investment Partners TFI.
